Project Abstract Submission Form

Sec No-7	Team No-6	Project Title- Blood Management System
----------	-----------	---

1. Abstract

The Blood Management System is a web-based application designed to simplify and centralize the management of blood donation, storage, requests, and distribution. The main problem addressed by the system is the difficulty in maintaining accurate information about blood availability, donor details, hospital requests, and blood stock, which can cause delays during emergencies. The proposed system provides a common platform connecting blood donors, blood banks, and hospitals. Donors can register and maintain their details, while hospitals can submit blood requests based on patient requirements and blood groups. Blood banks can manage inventory, track available units, monitor expiry dates, and update stock records. The system can also provide notifications for urgent requirements and low-stock conditions. By replacing manual record maintenance with a centralized digital system, the application can reduce errors, improve coordination, minimize blood wastage, and make blood availability information easier to manage. Overall, the Blood Management System aims to provide an efficient and reliable platform that supports timely blood distribution and improves coordination among donors, hospitals, and blood banks.

2. Team Details

Roll Number(s)	Name of the Student	Signature
2520030177	PAKALAPATI HARINI	
2520030375	PAKKIRU SAI HARSHITH REDDY	
2520030582	KAIRAV VASHI	

3. Frameworks / Platforms / Software Used

React.js, Node.js, Express.js, MySQL, HTML, CSS, JavaScript, Bootstrap, Visual Studio Code, Git and GitHub
